

Homesheds™

 **STRATCO**

The Homeshed range has outdoor storage solutions that combine form and function with quality manufacturing to deliver garages that last the distance.

High quality storage and protection solutions to complement your home.

## Gable Roof

Form and function come together in the classic shape of the Gable Homeshed. Featuring an extremely practical pitched roof, the Gable Homeshed range takes full advantage of the floor space available. More than just a timeless design, a pitched roof minimises heat build-up and increases your storage space on the inside, and delivers the benefits of a self-cleaning shape on the outside.

The frame of a Gable Homeshed is constructed using strong, galvanised C-section beams. The joints are welded to form a sturdy structure. The roof is clad with traditional corrugated steel in single sided colour and comes standard with gutters and downpipes. The double sided colour walls feature Superdek® sheeting which is a durable and hard-wearing sheet due to the 28mm high ribs in its profile. The sheeting on the gable wall is pre-cut to fit the gable shape for easy installation.

Gable Homesheds are available in a wide range of colours. Select either sliding doors or roller doors. If the side of the shed is to be built on a boundary, internal box gutters can be ordered. Optional extras include windows, skylights and a personal access door. Roller doors can be fitted with remote controlled door openers and the walls can be ordered in a corrugated profile for a different appearance.

## Shed Sizes

Gable Homesheds are available in 18 sizes, based on two single size widths and three double size widths. There are three heights of 2400mm, 2700mm and 3000mm to choose from. See the adjacent table for the dimensions.
