FENCING**

GOOD NEIGHBOUR • TRADITIONAL • HERITAGE

The Neighbourhood Fencing range is a comprehensive collection of styles and options tailored to the individual to provide stylish, affordable fencing choices that suit your home and lifestyle.

Enhance the view with high quality fencing that adds style and security.

Feature Fencing

Create a lasting impression with fencing that is designed to be a feature in itself. Stratco Heritage Fencing is designed to be an extension to the home that imparts a unique sense of quality, style and character.

Enhance the view rather than hinder it. With nine styles available and your choice of a huge range of powdercoated colours, Stratco Heritage Fencing is designed for style and will suit any type of home, from classic to modern.

A Quality Product

Built to be a lasting investment, Stratco Heritage Fencing is manufactured from galvanised steel tubing. The fencing is powdercoated for durability and resilience.

The contemporary styles in the Heritage Fencing range feature a 'through-rail' design where the vertical tubes pass through the top and bottom rails. This provides added strength and an identical appearance on both sides. In keeping with their traditional appeal, the classic styles in the Heritage Fencing range use strong, corrosion resistant silicone bronze welding to join the vertical tubes to the rails.

Selected styles have been fully tested by engineers to comply with Australian Standards AS1926.1 and AS2820 and are suitable for swimming pool applications. Contact your local Stratco for further details on the styles that comply.

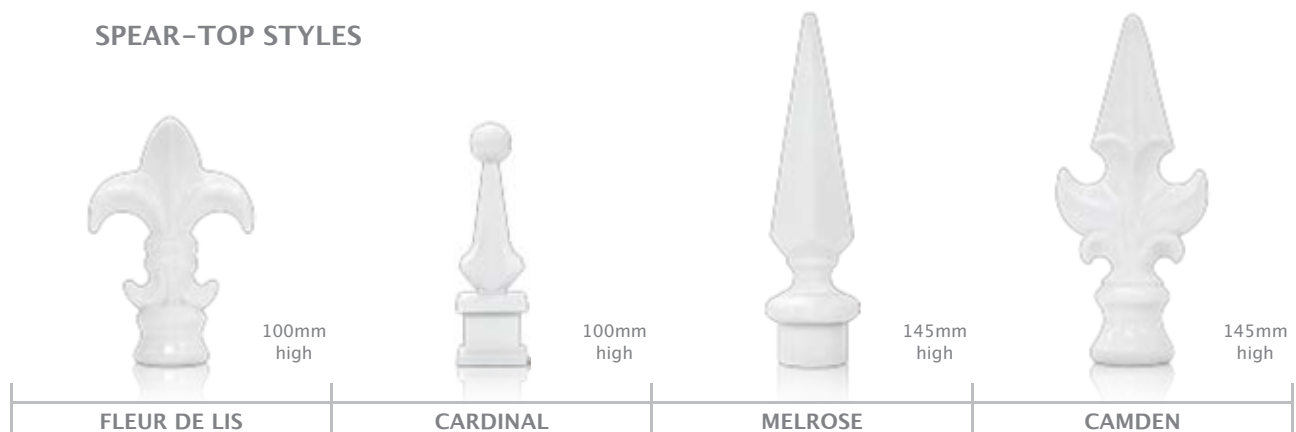

Design Flexibility

Heritage Fencing is sold by the panel. Its modular nature means Heritage Fencing can be stepped or sloped to cover uneven ground.

There are four nominal heights available: 900mm, 1200mm, 1500mm and 1800mm. The panel widths vary from 1000mm to 3000mm depending on the style. Custom panels can also be ordered in a size and style to suit your needs. It is important to note that regulations require a pool fence to be a minimum of 1200mm high.

Complete the look with a range of spear-tops to dress the end of the vertical tubes.

SPEAR-TOP STYLES

Simple Installation

Ideal as a 'do-it-yourself' project, Heritage Fencing is simple to install because the panels are pre-made and delivered as a complete package with all the posts and attachments required to build your fence. Alternatively, Stratco can arrange a free measure and quote from one of our Authorised Fencing Dealers.

Gates and Accessories

Complete the package with a grand entrance to your home, garage or pool. The Heritage Fencing range includes single or double garden and pool gates, and single, double or sliding driveway gates.

Sliding driveway gates can be ordered with an optional motorised remote gate opener for easy parking. Sliding driveway gates are only available in selected States, please check with your State for availability.

Maintenance

Heritage Fencing will keep its good looks for even longer with a simple wash and wipe down. Cleaning should be performed as often as is required to remove any dirt, salt and pollutants. Where the product is used around swimming pools, spas, or coastal and industrial areas with severely corrosive environments, cleaning should be performed more often. Refer to the Stratco 'Selection Use and Maintenance' brochure for more information.
